IRONPDF for .NET

Parth Talaviya
Founder, Prilixor Technologies

Results

Batch PDFs generated in seconds	Pixel-perfect HTML & CSS rendering	Minutes-to-production integration time

About Prilixor Technologies

Prilixor Technologies is a software development company specializing in building robust, production-ready applications for enterprise and mid-market clients. Their focus is on delivering high-quality solutions that balance performance, scalability, and maintainability especially for systems that support critical business operations.

Overview

Generating accurate, reliable PDFs is a common requirement in modern software products but it's rarely simple. Prilixor Technologies needed a PDF solution that could keep pace with complex layouts, high performance demands, and enterprise-grade reliability.

After evaluating multiple tools, Prilixor selected IronPDF to power their PDF generation workflows, enabling them to deliver consistent, high-quality documents with confidence.

Prilixor Technologies Clients

Trusted by leading global brands to deliver lasting quality, innovation, and measurable results.

Technical Challenge

Before adopting IronPDF, Prilixor faced several challenges with existing PDF tools:

- Increased development time spent troubleshooting PDF-specific issues
- Inconsistent rendering between HTML/CSS and final PDFs
- Performance issues under production workloads
- Difficulty maintaining complex layouts and styling

These limitations slowed delivery and added unnecessary risk to client projects.

Key Considerations

Compatibility

Prilixor required a solution that integrated seamlessly with modern .NET environments and supported standard web technologies like HTML, CSS, and JavaScript.

Performance

PDF generation needed to be fast, stable, and scalable—capable of handling production workloads without bottlenecks.

Security

Client documents often contain sensitive data, making reliability and predictable behavior essential.

Pricing

A clear, commercial licensing model was required—one that fit enterprise use cases without hidden costs or unsupported dependencies.

The Solution

Prilixor chose IronPDF, a .NET PDF library designed for real-world production use.
With IronPDF, developers could:

- Achieve pixel-perfect rendering without layout workarounds
- Convert HTML and CSS directly into PDFs
- Integrate quickly into existing .NET applications
- Reduce complexity by using familiar web technologies

IronPDF removed the friction from PDF generation and allowed teams to focus on delivering value.

The Results

By adopting IronPDF, Prilixor significantly reduced development time, eliminated layout inconsistencies, and delivered stable, high-quality PDFs across production environments.

Key Benefits

IronPDF empowers teams to deliver high-quality, production-ready PDFs faster by enabling pixel-perfect rendering from HTML and CSS, improving developer productivity, reducing maintenance and debugging effort, and providing enterprise-grade performance, reliability, and clear commercial licensing, making it an ideal solution for scalable business applications.
